Our study showed conclusively that Butterbeer has a much stronger intoxicating effect on muggles than it does on witches and wizards.

Granger (2010) proved that "Butterbeer has a much stronger intoxicating effect on muggles than it does on witches and wizards" (p.22).

Granger showed that "Butterbeer has a much stronger intoxicating effect on muggles than it does on witches and wizards" (as cited in Potter, 2011, p. 15).

Granger found that muggles get drunk much more easily from Butterbeer than magical people (as cited in Potter, 2011).

One study showed that "Butterbeer has a much stronger intoxicating effect on muggles than it does on witches and wizards" (Granger, as cited in Potter, 2011, p. 15).

One study found that muggles get drunk much more easily from Butterbeer than magical people (Granger, as cited in Potter, 2011).

Granger showed "that muggles get drunk much more easily from butterbeer than magical people" (Potter, 2011, p. 15).

Granger showed the different intoxicating effects of Butterbeer on magical and non-magical people (as cited in Potter, 2011).

One study by Granger showed "that muggles get drunk much more easily from Butterbeer than magical people" (Potter, 2011, p. 15).

One study showed the different intoxicating effects of Butterbeer on magical and non-magical people (Granger, as cited in Potter, 2011).
