</tr>
</tbody>
</table>

**Care & Handling**

Handle slides by frame only.

140 for slot trays jam more frequently than 40 slot trays.

**Get Familiar With**

- On/off
- Focus
- Forward/reverse button
- Location of gate index
- Select button
- Locking ring on slide tray
- Lens
Operating tips
Always secure locking ring before moving slide tray.
Always set tray to “0” to install or remove tray.
Image is upside down or backwards. Remove slide & insert properly.
Black screen. This is an advanced feature. The shutter remains closed when there is no slide present.

Basic Operation
1. Check that the power on the projector is Off. Plug the power cord into an electrical outlet.
2. Check that the locking ring is locked.
3. Set the projector Gate Index to “0”. Check that the bottom metal plate on the slide tray is also set to “0.”
4. Install the slide tray.
5. Press forward to display the first slide.
6. Use the focus button to adjust focus.
7. Use forward/reverse to view slides.
8. Use the Select button to position the slide tray to “0” on the projector gate index.
9. Remove the slide tray by lifting straight up.
10. Turn off power and unplug the projector.
