Using a Video Projection unit

Introduction
Used to project a video image to large audiences with DVD, Blue ray DVD or VHS format.

Terminology

| Combo unit
| Key stoning

Definition
A component that plays video in both DVD and VHS format.
This occurs when the projected image is narrower at the top or bottom.

Care & Handling
Use caution when transporting equipment.
Never force a media into the player.

Operating tips
Avoid projected image distortion (key stoning) by placing the projector perpendicular to the screen.

Basic Operation
1. Plug the power extension cord attached to the cart, into an electrical wall outlet.
2. Press Standby/on button on the projector.
3. Insert a DVD or VHS cassette in the combo unit.
4. On the combo unit, press play.
5. Focus the image by rotating the outside ring of the projector lens.
6. Adjust the image size by rotating the inner ring of the projector lens. Image size can also be adjusted by moving the projector closer or further away from the screen. Refocus when projector is moved.
7. Power On the volume control for the speaker system and adjust volume to desired level using the volume control.

Troubleshooting

Fix

| No projected image | Check that lens cap is removed. |
| No Sound | Check speaker system power is on. Adjust volume using volume control. |
| Projector is on, but no light is coming from the projector. | Return the equipment to the library. |
