**Abstract:** What can change the willingness of people to report crimes? A 6-month study in Denver investigated whether Body Worn Cameras (BWCs) can change crime-reporting behavior, with treatment-officers wearing BWCs patrolling targeted street segments, while control officers patrolled the no-treatment areas without BWCs. Stratified street segments crime densities were used as the units of analysis, in order to measure the effect on the number of emergency calls in target versus control street segments. Repeated measures ANOVAs and subgroup analyses suggest that BWCs lead to greater willingness to report crimes to the police in low crime density level residential street segments, but no discernable differences emerge in hotspot street segments. Variations in reporting are interpreted in terms of accountability, legitimacy, or perceived utility caused by the use of BWCs. Situational characteristics of the street segments explain why low-level street segments are affected by BWCs, while in hotspots no effect was detected. Here is the correct APA citation format:

Spot the mistakes in this computer-generated “APA” citation:

What if I can’t find a DOI?

If a database does not give a DOI number for an article, look at the full-text PDF. If the article has been assigned a DOI, it should appear somewhere on the first page. If you still cannot find a DOI, then list the URL for the journal publisher’s website instead. (You can find this by searching for the journal title in Google.) For example:

⇒ For help using APA style, please see the library’s guide at: [http://libguides.kpu.ca/apa](http://libguides.kpu.ca/apa)

Practice Exercise (if time):

Search in the PsycINFO research database for literature reviews from peer-reviewed journals published in the last 10 years on youth or juvenile gang violence.

![PsycINFO search interface]

Now look in your search results for an article that focuses on social media.

Create an APA citation for this article:

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

Note: Literature reviews are NOT primary research articles. They summarize and compare previously-published primary research. A literature review can be an excellent place to start your search for primary research articles on your topic.
